Profile

// *I'm a Web Developer* with a versatile and creative background.

After graduating from the General Assembly Web Immersive program, I have a solid grasp on Javascript and full-stack applications. In the last three months I've been coding in every hour of my free time, teaching myself more about full-stack programming, data structures, algorithms, and working with modern frameworks like React.

I have natural design instincts, I prioritize writing clean code, and I'm adaptive by nature. I'll be the fastest learner on your team.
